*The IoT Box Concept*

# PsiConnect

*The IoT Box Concept*

## Connectivity in a box

One modular box that integrates all connectivity components and antenna with just a single cable to your appliance controller.

## Plug and play connectivity

Most modern mobile connection technologies like NB-IoT & LTE-M enable true plug and play connectivity from the factory. No passwords or end user dependency are required.

## One modular device

Use one modular device to connect your entire range and variants of appliances: no multiple certifications and no mutual interference with your appliance electronics.

## Customization:

Come and talk to our engineers about your specific project: low power options, 2G backup, SigFox, LoraNet, WiFi, Bluetooth, Z-wave, ZigBee, Enocean, or our own Psi-RF protocol. PsiControl has accumulated vast and specific expertise in the areas of RF and wireless technology.
