

**CUSTOM-MADE ELECTRONIC SOLUTIONS
FOR RV AND CARAVAN**

As a proven and reliable partner to major customers in the industrial, HVAC and automotive sectors, PsiControl has several decades of experience in developing and producing innovative, cost-effective electronic solutions, enabling our customers to create differentiating products, bringing industry forward. With a special focus on smart modern user interfaces and wireless connectivity, PsiControl ensures your product is ready to face the future.

CUSTOMIZED PLATFORMS

A caravan control - tailored to your needs

- Starting from a portfolio of proven electronic platforms, PsiControl will develop your very own brand-specific product. Much more efficient than designing from scratch, it features greater exclusivity and brand identity than a mere re-branded standard product.
- Custom-made for you, screenless or with displays from 2" to 19", touchscreens or sliders and buttons, stylish and fashionable, using optimized and cost-effective techniques - this is a unique solution for your caravan.

NEW TECHNOLOGIES

Don't just keep up, be different!

- In our quest to explore new technological developments, we integrate them into our designs to bring innovative solutions. Our approach: minimize gadgetry, maximize usefulness!
- Whether it's a more cost-effective way of creating an HMI, controlling your caravan by simply talking to it, or making the caravan so smart it tells you what's going on, so you can just relax! And with a partner like PsiControl, you can just relax.

RESPONSIVE, ANIMATED TOUCH HMI

A user experience that users expect

- Experience a full smartphone user experience - without the complexity or cost, with your design perfectly integrated in your RV or caravan.
- Responsive and fluent, natural feel animation is key to a pleasant and intuitive user interface. It brings the interface to the world of the users rather than forcing the user inside the interface. A direct link to an identical interface on your smartphone makes controlling your caravan a natural, transparent experience.

CONNECTIVITY

Camping on a Cloud

- With decades of experience in industry and HVAC, PsiControl has considerable expertise in various communication protocols and technologies. Connecting the controller to your caravan via CANbus or CI-bus is simple.
- With our own RF & EMC test facilities, our focus on wireless technologies is only increasing. From local connections with WiFi and Bluetooth to IoT cellular connections with the new NB-IoT or LTE-M technologies, we'll connect you!
